

Data Governance Report

Executive Summary

This scan identified unmasked personal data in customer tables, posing a high compliance risk under DPDP. Immediate remediation is required before further data usage.

Risk Overview

Risk	Assigned Owner	Impact
Apply masking or tokenization to protect sensitive data	Data Engineering / Data Steward	Potential DPDP non-compliance and exposure of personal data
Increase sample coverage and resolve profiling limitations	Data Engineering / Data Steward	Potential DPDP non-compliance and exposure of personal data
amount contains negative values	Data Engineering / Data Steward	Potential DPDP non-compliance and exposure of personal data
city has 66.67% null values	Data Engineering / Data Steward	Potential DPDP non-compliance and exposure of personal data
customer_email contains invalid email formats	Data Engineering / Data Steward	Potential DPDP non-compliance and exposure of personal data
Apply masking or tokenization to protect sensitive data	Data Engineering / Data Steward	Potential DPDP non-compliance and exposure of personal data
email contains invalid email formats	Data Engineering / Data Steward	Potential DPDP non-compliance and exposure of personal data
Increase sample coverage and resolve profiling limitations	Data Engineering / Data Steward	Potential DPDP non-compliance and exposure of personal data

PII Exposure

PII Exposure

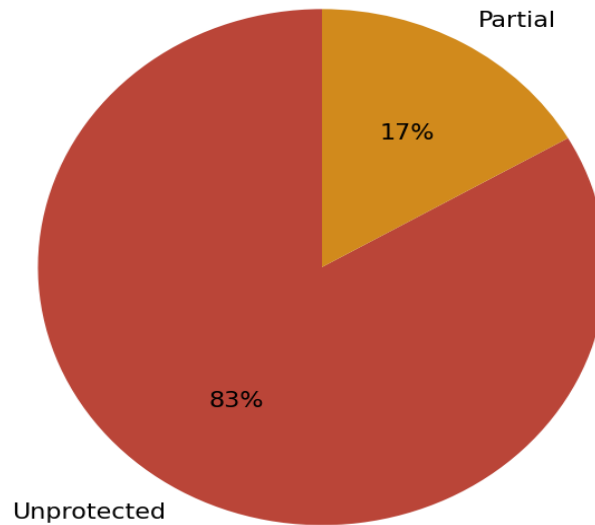

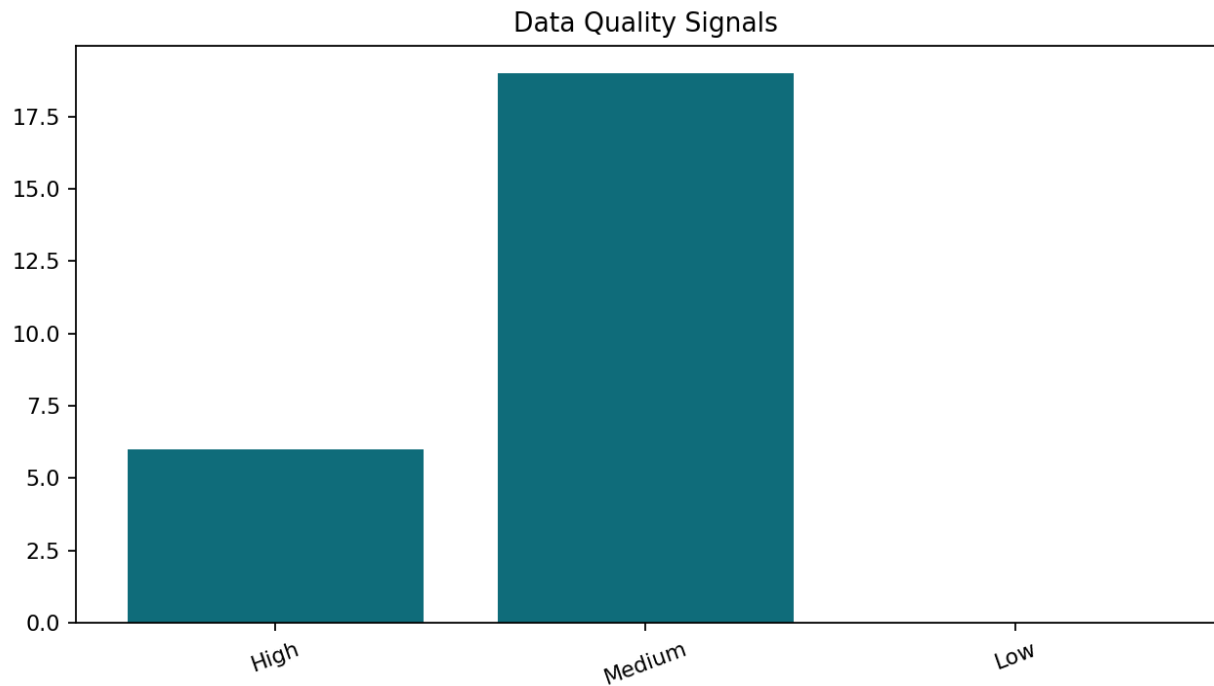

Table	Column	Exposure	Recommendation
dpdp_clean.customers	full_name	Unprotected sensitive data	Apply masking or tokenization to protect sensitive data and restrict unauthorized access
dpdp_clean.customers	email	Unprotected sensitive data	Apply masking or tokenization to protect sensitive data and restrict unauthorized access
dpdp_masked.masked_customers	masked_email	Partially protected sensitive data	Maintain existing controls and continue monitoring
dpdp_masked.masked_customers	masked_phone	Partially protected sensitive data	Maintain existing controls and continue monitoring
dpdp_masked.communication_preferences	masked_contact	Partially protected sensitive data	Maintain existing controls and continue monitoring
dpdp_no_relationships.product_catalog	product_name	Unprotected sensitive data	Apply masking or tokenization to protect sensitive data and restrict unauthorized access
dpdp_pii_exposure.customer_profiles	full_name	Unprotected sensitive data	Apply masking or tokenization to protect sensitive data and restrict unauthorized access
dpdp_pii_exposure.customer_profiles	email	Unprotected sensitive data	Apply masking or tokenization to protect sensitive data and restrict unauthorized access
dpdp_pii_exposure.customer_profiles	phone_number	Unprotected sensitive data	Apply masking or tokenization to protect sensitive data and restrict unauthorized access
dpdp_pii_exposure.support_tickets	requester_email	Unprotected sensitive data	Apply masking or tokenization to protect sensitive data and restrict unauthorized access

Data Quality

Profiled 13 table(s). Data quality score is 96.68.

AI Insights

- Apply masking or tokenization to protect sensitive data
- Increase sample coverage and resolve profiling limitations
- 8 high-severity RAID risks were identified, indicating elevated governance exposure.
- Inferred relationships across 22 column pair(s) suggest shared identifiers that should be validated for lineage and access control.

Recommendations

Critical

- dpdp_clean.customers.full_name contains NAME and is unprotected sensitive data.
Impact: Potential DPDP non-compliance and exposure of personal data
- dpdp_clean.customers.email contains EMAIL and is unprotected sensitive data.
Impact: Potential DPDP non-compliance and exposure of personal data
- dpdp_no_relationships.product_catalog.product_name contains NAME and is unprotected sensitive data.
Impact: Potential DPDP non-compliance and exposure of personal data
- Increase sample coverage and resolve profiling limitations
Impact: Potential DPDP non-compliance and exposure of personal data
- dpdp_pii_exposure.support_tickets.requester_email contains EMAIL and is unprotected sensitive data.
Impact: Potential DPDP non-compliance and exposure of personal data
- dpdp_poor_quality.customer_imports.full_name contains NAME and is unprotected sensitive data.
Impact: Potential DPDP non-compliance and exposure of personal data

Improvements

- Increase sample coverage and resolve profiling limitations
Impact: May reduce profiling confidence and governance clarity
- dpdp_poor_quality.customer_imports has no primary key in source metadata.
Impact: May reduce profiling confidence and governance clarity

- dpdp_poor_quality.payment_imports has no primary key in source metadata.

Impact: May reduce profiling confidence and governance clarity

- full_name has 33.33% null values

Impact: May reduce profiling confidence and governance clarity

- email has 33.33% null values

Impact: May reduce profiling confidence and governance clarity

- phone_number has 33.33% null values

Impact: May reduce profiling confidence and governance clarity

Observations

- Apply masking or tokenization to protect sensitive data

Impact: Useful for lineage validation and access review

- Increase sample coverage and resolve profiling limitations

Impact: Useful for lineage validation and access review

- dpdp_clean.customers -> dpdp_clean.orders relationship signal detected.

Impact: Useful for lineage validation and access review

- dpdp_clean.customers -> public.customers relationship signal detected.

Impact: Useful for lineage validation and access review

- dpdp_clean.customers -> public.orders relationship signal detected.

Impact: Useful for lineage validation and access review

- dpdp_clean.orders -> public.customers relationship signal detected.

Impact: Useful for lineage validation and access review

- Apply masking or tokenization to protect sensitive data

- Deduplicate records and enforce uniqueness rules for the affected dataset.

- Review and remediate: amount contains negative values.

- Define completeness rules and remediate null-heavy fields in 66.67%.

- Fix invalid formats and add validation rules for the affected dataset.

- Increase sample coverage and resolve profiling limitations
