

Data Governance Report

Executive Summary

This scan identified unmasked personal data in customer tables, posing a high compliance risk under DPDP. Immediate remediation is required before further data usage.

Risk Overview

Risk Distribution

Risk	Assigned Owner	Impact
Apply masking or tokenization to protect sensitive data	Data Engineering / Data Steward	Potential DPDP non-compliance and exposure of personal data

PII Exposure

PII Exposure

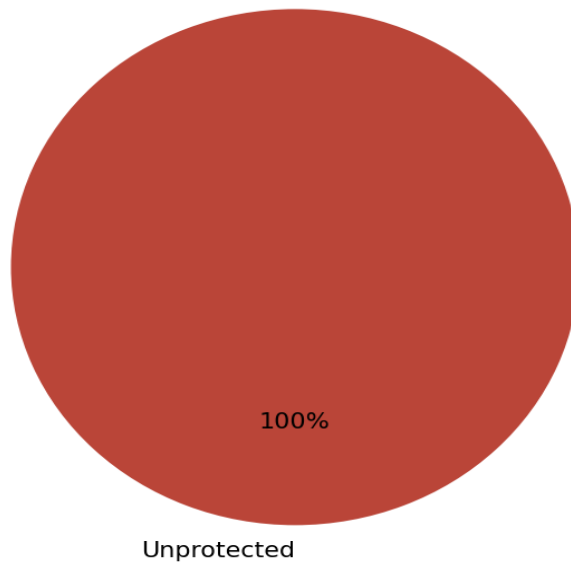

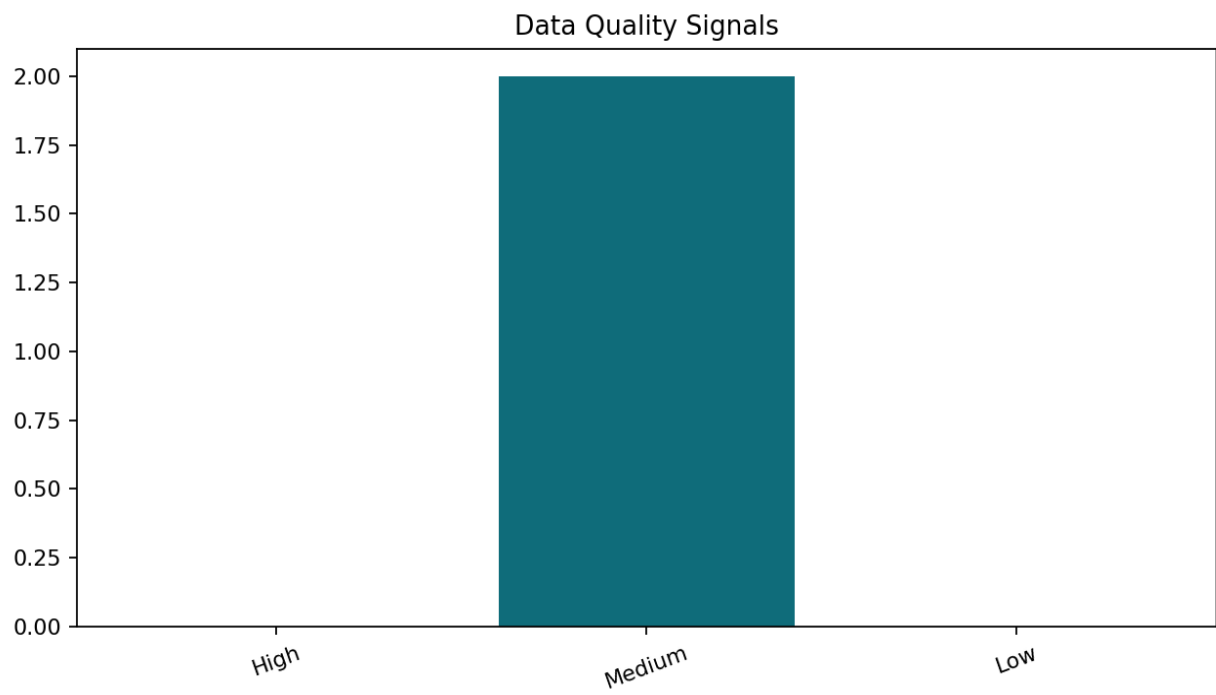

Table	Column	Exposure	Recommendation
public.customers	customer_name	Unprotected sensitive data	Apply masking or tokenization to protect sensitive data and restrict unauthorized access
public.customers	email	Unprotected sensitive data	Apply masking or tokenization to protect sensitive data and restrict unauthorized access

Data Quality

Profiled 2 table(s). Data quality score is 100.0.

AI Insights

- Apply masking or tokenization to protect sensitive data
- Increase sample coverage and resolve profiling limitations
- Inferred relationships across 1 column pair(s) suggest shared identifiers that should be validated for lineage and access control.

Recommendations

Critical

- public.customers.customer_name contains NAME and is unprotected sensitive data.
Impact: Potential DPDP non-compliance and exposure of personal data
- public.customers.email contains EMAIL and is unprotected sensitive data.
Impact: Potential DPDP non-compliance and exposure of personal data
- Apply masking or tokenization to protect sensitive data
Impact: Potential DPDP non-compliance and exposure of personal data

Improvements

- Increase sample coverage and resolve profiling limitations
Impact: May reduce profiling confidence and governance clarity
- Primary key is not defined for public.customers.
Impact: May reduce profiling confidence and governance clarity
- Primary key is not defined for public.orders.
Impact: May reduce profiling confidence and governance clarity

Observations

- public.customers -> public.orders relationship signal detected.
Impact: Useful for lineage validation and access review
- Increase sample coverage and resolve profiling limitations
- Apply masking or tokenization to protect sensitive data
